

EasyClad 5S Slatted Composite Cladding.

SPECIFICATION DATA

EasyClad 5S composite cladding combines the natural look and texture of wood with the durability of advanced modern materials, providing long-lasting performance with minimal maintenance.

Composite cladding has none of the usual drawbacks of timber, such as warping, rotting, or requiring regular painting/staining. A simple cleaning routine every six months or so is all that is needed to keep it looking its best, and a long-life warranty provides additional peace of mind.

EasyClad 5S is a stylish and durable way to update the look of interior and exterior walls. It is an ideal solution for home renovations, extensions, and structures such as home office pods, garden rooms etc.

Beyond residential use, it is a smart choice for commercial environments. Offices, hotels, restaurants etc can all benefit from its refined, professional look in high profile areas, such as terraces, gardens, lobbies, receptions, conferencing facilities, or dining areas.

Designed with installers in mind, these extra-large five slat cladding modules reduce fixing time over a project, when compared to smaller three or four slat systems, and are available with a comprehensive range of accessories, including aluminium clips and starter bars, colour-matched trims, and fixing and locking screws. Dimensions /weights are shown overleaf and full installation instructions are available.

Material

Composite, comprising reclaimed wood fibres and recycled plastic

Cladding Pattern

5 x 26mm battens with 12mm shadow gaps

Warranty

25 Years

Specification details available in NBS format
