

Paving Stone

Material:
100% recycled plastic

Grey

Offering a simple and timeless look, these grey **Paving Stone** modules are manufactured from 100% recycled plastic. They are suitable for use in driveway and footpath applications, easy to install, and highly durable, allowing outdoor spaces to be transformed in double quick time.

With just four modules required per square metre, path or driveway laying is faster and easier than with traditional individual paving stones. The modules can be cut to size with a standard jigsaw where required, enabling special shapes and corners to be created with ease.

Sealing just 85% of the area, they remain permeable so rainwater seeps into the finished paved area without pooling. An appropriate filler, such as joint sand, should be swept into the joints and the area can be used immediately.

Each module weighs 8.4kg and measures D 6cm x W 50cm x L 50cm.

- Requirement per m² approx. 4 elements
- Sealed surface approx. 85 %.
- Fill volume to top edge approx. 0.01 m³ per m²
- Suitable for load class SLW 60 (60t heavy goods vehicle) in accordance with DIN 1072
- Interlocking system
